

## Local Variables

- 1) Local Variables are declared inside the **Method, Constructor or Blocks**.
- 2) Local Variables are stored in **Stack Memory**.
- 3) Local Variables will be **Created** while **Executing** the **Block** in which we declared it.
- 4) Once Block execution **Completes** automatically local variable will be **Destroyed**.
- 5) The **Scope** of the Local Variable is the **Block** in which we declared it.
- 6) Cant have **default values**, so value have to be assigned.
